

COOLER SHOCK Ice Pack Instructions for Setup and Use

A video of the setup process is available at CoolerShock.com

Have the caps and silicone corks nearby and set aside ready for use. Measure out tap water according to the size pack you are filling:

| | | | |
|------------|----------|-------------------|----------|
| Large Pack | 10 x 14: | 56 oz. (7 Cups) | per pack |
| Mid Pack | 10 x 10: | 28 oz. (3 ½ Cups) | per pack |
| Lunch Pack | 7 x 7: | 12 oz. (1 ½ Cups) | per pack |

1. Let the water stand for a few minutes to release the air bubbles. Hold the pack over a sink and gradually pour the water into the spout using the provided collapsible funnel.
2. Gently squeeze the pack (against your chest works well) while keeping the opening straight up so you can see the water rising to the top. When the water reaches the top, push in the silicone cork narrow end first until flush (wetting the corks makes installation easier). Once the cork is installed, it cannot be removed.
3. Now screw the cap on as tightly as possible. Please note that it takes a strong final twist for the screw cap. Have the strongest person around do the final twist. That's it! Pack will turn to gel in about 20 minutes.
4. Place packs in the freezer for:

| | |
|------------|-------------|
| Large Pack | 24-48 hours |
| Mid Pack | 12-24 hours |
| Lunch Pack | 8 hours |

Why the range? Even though packs seem to be frozen hard, the core of the pack may still be warm. This can be due to freezer performance or freezer use (opening door regularly). It's best to separate packs when freezing as stacked packs take longer to freeze due to the reduced surface area.

Caution: The cooler pack uses a high-performance material that can be rigid or sharp along the edges when frozen. Please be careful when handling.

About Cooler Shock

- Cooler Shock uses a science called "phase change" allowing it to hold a large amount of cooling energy at a much lower temperature than ice.
- Cooler Shock is an energy absorbing material that outperforms ice by 14 degrees while lasting much longer. It's reusable and non-hazardous.
- Cooler Shock comes with our powdered formula inside, to which you add water. This reduces weight and size allowing the consumer to get 3 to 4 ice packs for the price of one. With the larger quantity, you can completely replace ice.

Service and Support *Learn more and see our "best practices" guide on CoolerShock.com*

Cooler Shock is a family-owned business based in Phoenix, AZ. We pride ourselves in customer satisfaction. Did you misplace a cork? Lose a cap? Call us or send us an email. We will get a replacement out to you within 24 hours. If you are not satisfied for any reason, please contact us and let us make it right.

Our success is driven by your product reviews. If you have a minute would you please review our product on Amazon? Just visit your order on Amazon and click the area where it says review product. Thank you!
